Coding & Solution

Date	30 June 2026
Team ID	
Project Name	Rising Waters
Maximum Marks	5 Marks

This section evaluates the quality and completeness of the implemented code and the overall solution. The submission demonstrates working functionality, clean code practices, and alignment with the defined requirements.

Instructions followed:

1. Code is well-structured, commented, and follows best practices for the chosen technology stack
2. The solution addresses the core problem statement and implements the key functional requirements.
3. All source files, configuration files, and setup instructions needed to run the application are included.
4. The code repository link is provided in the table below.

Solution Summary

Repository Link / URL	https://github.com/rajputhdheerajkumarsingh-ux/Smart_Lender
Programming Language(s)	Python, JavaScript, HTML5, CSS3
Framework(s) Used	Flask, scikit-learn, SQLAlchemy, Pandas

Key Features Implemented	- scikit-learn Linear Regression model. - SQLite simulation database persistence. - Dynamic SVG visual reports. - Country-specific preset loading. - Glassmorphism workspace design.
Pending / Incomplete Features	None. All planned features successfully completed.
Setup / Run Instructions	1. Run python Flask/init_db.py to build DB. 2. Run python Training/train.py to train model. 3. Run python Flask/app.py and visit http://127.0.0.1:5000/

Code Quality Check List

#	Criteria	Status
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes
