Customer Journey Map

Phase of Journey	Stage 1 Monitor Water Levels	Stage 2 Analyze & Predict Risk	Stage 3 Receive Alerts & Take Action
Actions	- Opens Rising Water Monitoring website/app. - Selects location or water body. - Views current water level and weather conditions.	- System collects sensor and weather data. - AI/ML analyzes water level trends. - Predicts flood risk and rising water conditions.	- User receives flood alerts and safety recommendations. - Reviews predicted water level and risk status. - Takes preventive action or follows evacuation guidance.
Touchpoint	- Home/Landing page. - Live water level dashboard. - Location selection and map.	- Sensor data processing. - Weather API integration. - AI prediction engine.	- Alert dashboard. - SMS/Email/App notifications. - Emergency contact & evacuation information.
Customer Thought	"Is the water level safe?" "Will heavy rain affect my area?" "Can I trust this data?"	"How accurate is the prediction?" "Will flooding occur soon?" "How much time do I have?"	"What should I do now?" "Which areas are at risk?" "Where is the nearest safe location?"
Customer Feeling	- Curious and alert. - Wants reliable monitoring. - Feels informed.	- Concerned but hopeful. - Expects accurate predictions. - Wants timely updates.	- Confident with early warning. - Prepared for emergencies. - Feels safer with guidance.
Process Ownership	- Frontend Developer (UI/UX) - IoT Sensor Integration - Database Administrator	- Backend Developer (Data Processing) - AI/ML Engineer (Flood Prediction) - Weather API Integration	- Notification Service - Frontend Dashboard - Emergency Support Team
Opportunities	- Improve dashboard visualization. - Add real-time maps. - Support multiple locations.	- Improve prediction accuracy. - Reduce processing delay. - Handle missing sensor data.	- Send instant alerts. - Provide evacuation routes. - Generate downloadable flood reports.
