Project Name	Rising Waters
Maximum Marks	5 Marks

Problem-Solution Fit Canvas – Raising Water Monitoring & Flood Alert System

1. Customer Segment(s) [CS] People living in flood-prone areas, local residents, farmers, authorities, and disaster management teams who need real-time water level information and early flood alerts. Government agencies, municipalities, NGOs and emergency response organizations.	6. Customer Limitations [CL] - Limited awareness about real-time water levels and flood risks. - Lack of accurate and timely information. - Dependence on manual updates and news. - No early warning system. - Limited access to technology in remote areas.	5. Available Solutions [AS] Pros: Existing websites and mobile apps provide some weather updates and flood news. Cons: Data may not be real-time, alerts are delayed, lack of localized water level monitoring, and no personalized alerts.
2. Problems / Pains + Frequency [PR] - No real-time monitoring of river, lake or reservoir water levels. - Uncertainty about rising water and flood risk. - Delayed alerts lead to property and life loss. - Manual reporting is inaccurate and time-consuming. (Occurs frequently during heavy rainfall and monsoon season)	9. Problem Root / Cause [RC] Traditional water level monitoring relies on manual observation and periodic reporting which causes delays, inaccurate data, lack of real-time analysis and absence of predictive alerts.	7. Behavior + Intensity [BE] People feel worried and unprepared during heavy rains and rising water. They keep checking news and asking others for updates, but still feel uncertain. Intensity: High
3. Triggers to Act [TR] - Heavy rainfall and flooding news. - Rising water levels in nearby areas. - Past flood experiences. - Government warnings or sirens. - Advice from neighbors, relatives or authorities.	10. Your Solution [SL] Raising Water – AI Powered Water Level Monitoring & Flood Alert System. Provides real-time water level updates using IoT sensors and predicts flood risk using AI/ML models. Sends instant alerts and notifications with safe zones and helpful recommendations to protect lives and property.	8. Channels of Behavior [CH] ONLINE: Web dashboard, mobile app, SMS alerts, email notifications, social media updates, government portals. OFFLINE: Sirens, community notice boards, local TV/radio, disaster management teams.
4. Emotions Before/After [EM] Before: Fear, uncertainty, stress, helplessness, confusion due to lack of information. After: Safety, preparedness, confidence, peace of mind and satisfaction from timely alerts and accurate water level updates.
